Profile

Versatile UI/UX Designer & Internal Applications Developer with a strong background in IT, process improvement, and warehouse operations. As the sole designer for a leading firearms distribution company, I create intuitive, consistent, and efficient user interfaces that support internal teams across the organization. Skilled in transforming complex workflows into clean user experiences, collaborating with developers, and contributing to planning and review cycles to ensure high-impact system enhancements. Known for problem-solving, adaptability, and continuous learning in fast-paced environments.

Education

Austin Peay State University (2019 - 2023)

Bachelor of Science in Computer Science.

I studied topics like web development, IT systems, and design.

Work History

UI Designer/Developer - Chattanooga Shooting Supplies (2022 - current)

I lead all UI/UX efforts for our internal applications, designing components, layouts, and full page workflows in Figma, and developing the front-end implementations in collaboration with our team in Adobe ColdFusion. I participate in spec reviews, planning sessions, and code review discussions to ensure designs align with user needs and business goals. I also create documentation, design guidelines, and reusable components to streamline development. Alongside design and front-end work, I support continuous improvement by gathering user feedback, identifying workflow issues, and recommending enhancements, and I contribute to IT operations through monthly newsletters, knowledge base updates, and occasional helpdesk support during peak periods.

Warehouse Worker - Chattanooga Shooting Supplies (2019 - 2022)

I worked in our warehouse where I handled receiving, picking, packing, and shipping orders. I used scanning tools to track inventory and helped keep things running smoothly and accurately. I became a go-to person for training new team members and was always looking for ways to make things faster and more efficient.

IT Assistant - Divco Data (2017 - 2019)

I helped support employees with day-to-day tech issues, like setting up computers, troubleshooting software, and keeping everything running behind the scenes. I worked on small projects to improve processes, helped track tickets, and learned a lot about how IT supports a company from the ground up.
